Experience

Stripe **September 2026**
Incoming Software Engineer – DEeP / Compartments & Account Platform (CAP) *Toronto, ON*

CircleCI **May 2026 – August 2026**
Software Engineer *Toronto, ON*

- Migrated CircleCI's Pipelines search data layer from v2 to v3, replacing per-pipeline workflow fan-out with a single-response architecture and adding missing **Go** backend serialization for an API serving **1.6M+ requests/day** at a **0.0003% 5xx rate**
- Built and shipped the web onboarding/install flow for CircleCI's **Cursor Origin** integration within a **one-week launch window**, including organization linking/creation, feature-flag rollout, and privacy-safe funnel instrumentation
- Owned filters, workflow visualization, and state reliability for the redesigned Pipelines experience, contributing to a rollout where team-reported task completion rose from **30% to 70%** and favourability from **15% to 50%**

Dayforce **September 2025 – May 2026**
AI Software Engineer *Toronto, ON*

- Founded and built **Vision**, an AI-powered browser automation product using **Playwright and MCP** to turn natural-language test scenarios into executable workflows, reducing manual client-configuration validation by **85%**
- Developed **QueryGPT**, an SQL agent generating queries from natural-language prompts across **5,000+ tables**, reducing report generation from **10 hours to under 5 minutes** for **1,000+ annual reports**

Magnet Forensics **January 2025 – April 2025**
Software Engineer Intern *Toronto, ON*

- Developed Fastrak in C# / .NET to offload mobile-device acquisition from GrayKey to standard PCs, reducing GrayKey usage per device by **85%** and enabling simultaneous extractions
- Designed a modular acquisition architecture using **dependency injection and the factory pattern**, automatically selecting workflows by phone model and allowing new device handlers to be added with minimal code changes

Annaly **February 2024 – August 2024**
Software Engineer Intern *Toronto, ON*

- Designed and built an **ETL monitoring system** using C#, .NET, vCron, and SQL Server to track data arrivals from **30+ vendors**, reducing incident response time by **95%**
- Migrated **24** financial calculation applications from Microsoft Interop to ClosedXML, cutting execution time by **50%** and server CPU usage by **40%**

KOHO **May 2022 – May 2023**
Software Engineer Intern *Toronto, ON*

- Built **Go**-based integration tests and CI tooling for user registration and Save Accounts workflows in **Jenkins**, reducing QA and development cycles by **45%**
- Integrated **Google Pay API** into KOHO's mobile app, driving **40% adoption** among Android users and processing **$2M** in transactions within the first quarter of launch

University of Toronto **January 2022 – May 2025**
Teaching Assistant – Computer Science *Mississauga, ON*

- Instructed **3,000+ students** across **6 semesters** in data structures, algorithms, object-oriented programming, and complexity using **Python**
- Led weekly labs across **5 sections**, developing lesson plans and providing individualized support that improved average grades by **47%**

Education

University of Toronto **September 2019 – April 2025**
Honours Bachelor of Science in Computer Science

Technical Skills

Languages: Python, Go, C#, TypeScript/JavaScript, SQL, Java, C/C++
Frameworks & Tools: React, Next.js, .NET, FastAPI, Docker, Kubernetes, Redis, MongoDB, SQL Server, Datadog
AI/Developer Tools: Claude Code, Codex, Cursor, MCP, Playwright
